IT Costs Skyrocketing? Switch to SAAS Time-Tracking

Sound familiar?

Several years back, your IT guy (or perhaps an outside firm) created a system for tracking employee time and expenses. The data was stored on the company server. Staff entered their time into a simple computer-based interface via the company Intranet.

It wasn't perfect, but it worked.

Over time, more functionality was added. The system became bigger and more complex. But it never really improved. It was buggy, unreliable and prone to crashes. Perhaps data was completely lost once or twice.

Today, the system seems worse than ever. But it's more than just a headache for your staff. It's costing you a ton of money to constantly have your IT guys fixing it. It's a constant drain on your profits, and the costs only seem to be going up.

Isn't it time to find a better, more cost-efficient solution?

Switching to Saas (Software as a Service)

Skyrocketing IT costs are just one of the many reasons that our customers switch to TimeSolv. Because TimeSolve is SaaS-based, law firms and other professionals don't have to worry about maintaining their own system. It's all hosted on TimeSolv's own secure servers – and that's only the beginning of the benefits.

Access from anywhere
You can enter time and expenses into TimeSolv from anywhere with an

Internet connection. Enter data on any Windows or Mac desktop, or via the TimeSolv mobile app for iPhone, iPad and Android smartphones and tablets.

No internet? No problem. You can even enter time when you're offline, and sync it later when you have a connection again.

No IT guys needed
Everything is stored on a state-of-the-art data center provided by Amazon Web Services (AWS) – using the same trusted technology that powers some of the world's largest online brands. We perform all maintenance on our end and updates are automatic.

Secure data encryption & protection
Highly encrypted 128-bit SSL is used for data transmission between your device and our data center. AWS has completed SAS 70 compliance and a Type II Audit, and it is ISO 9001 certified. We are also PCI DSS compliant, so you can rest assured your data is secure.

Reliable uptime
There's no reason you should be using a clunky system that is crashing all the time. TimeSolv has virtually 100% uptime by utilizing a state-of-the-art agile development environment.

What if you prefer to host TimeSolv on your own servers? No problem.

We can customize TimeSolv to your unique needs, while giving you full control over data security and determining when updates and maintenance are performed.

Don't let your current time-tracking/billing solution drag down your bottom line any longer. Switch to TimeSolv and say goodbye to those surging IT costs.
